

RheoTec – A successful subsidiary of Brookfield

We are pleased to inform you that by acquisition RheoTec Messtechnik GmbH has become a subsidiary of Brookfield Engineering Laboratories Inc., the very successful international organization with headquarter in Middleboro/Massachusetts (USA). They are worldwide accepted as market leader in manufacturing of instrumentation for viscosity and texture measurement. Meanwhile, Brookfield exist for more than 75 years which is an outstanding reference regarding the continuously and future-oriented corporate policy. The growing synergy and long-term relationship between the two companies led to the recent acquisition as a natural conclusion to their successful partnership.

With combined resources RheoTec has available an extended product range and versatile service opportunities by now. We will continue to remain your qualified professional contact for all questions in laboratory viscosity measurement, process control and general rheological issues.

RheoTec will manufacture the approved and top-selling rheometers of RC/RS generation as well in the future with unchanged high quality performance and modified name under the Brookfield label. Apart from those very successful long-term established products like Falling Ball and Process Viscometers, we can offer in addition the whole range of well-known Brookfield products for laboratory and process applications in rheology and texture analysis.

Servicing, calibration and spare parts supply for existing RheoTec instrumentation will be naturally carried out unchanged by our company. Furthermore, from now on the same support can be offered for the whole Brookfield product range.

We highly appreciate to number you among our long-time faithful friends or prospective customers, and we would be pleased to be able to continue this successful cooperation together with you. On this note, we also like to welcome all new visitors on our webpage. You would be invited to learn more about the German company RheoTec located nearby Dresden.
